

# The wonders of iNaturalist

and why you should embrace community-science derived data

Florencia Grattarola | MOBI Lab | Czech University of Life Sciences in Prague

# iNaturalist

[inaturalist.org](https://inaturalist.org)

- A multi-taxa platform hosted by the **California Academy of Sciences** and the **National Geographic Society**.

🍄 Kingdom Fungi (Hongos)

🕷 Class Arachnida (Arachnids)

🦎 Class Reptilia (Reptiles)

🐫 Class Mammalia (Mammals)

🐸 Class Amphibia (Amphibians)

🐦 Kingdom Animalia (Animals)

🐚 Phylum Mollusca (Molluscs)

🌿 Kingdom Plantae (Plants)

🐞 Class Insecta (Insects)

⟲ Kingdom Chromista (Kelp, Diatoms, and Allies)

🐟 Class Actinopterygii (Ray-finned Fishes)

🐦 Class Aves (Birds)

# iNaturalist

[inaturalist.org](https://inaturalist.org)

- Its primary goal is to connect people to nature, and the secondary goal is **to generate scientifically valuable biodiversity data**.

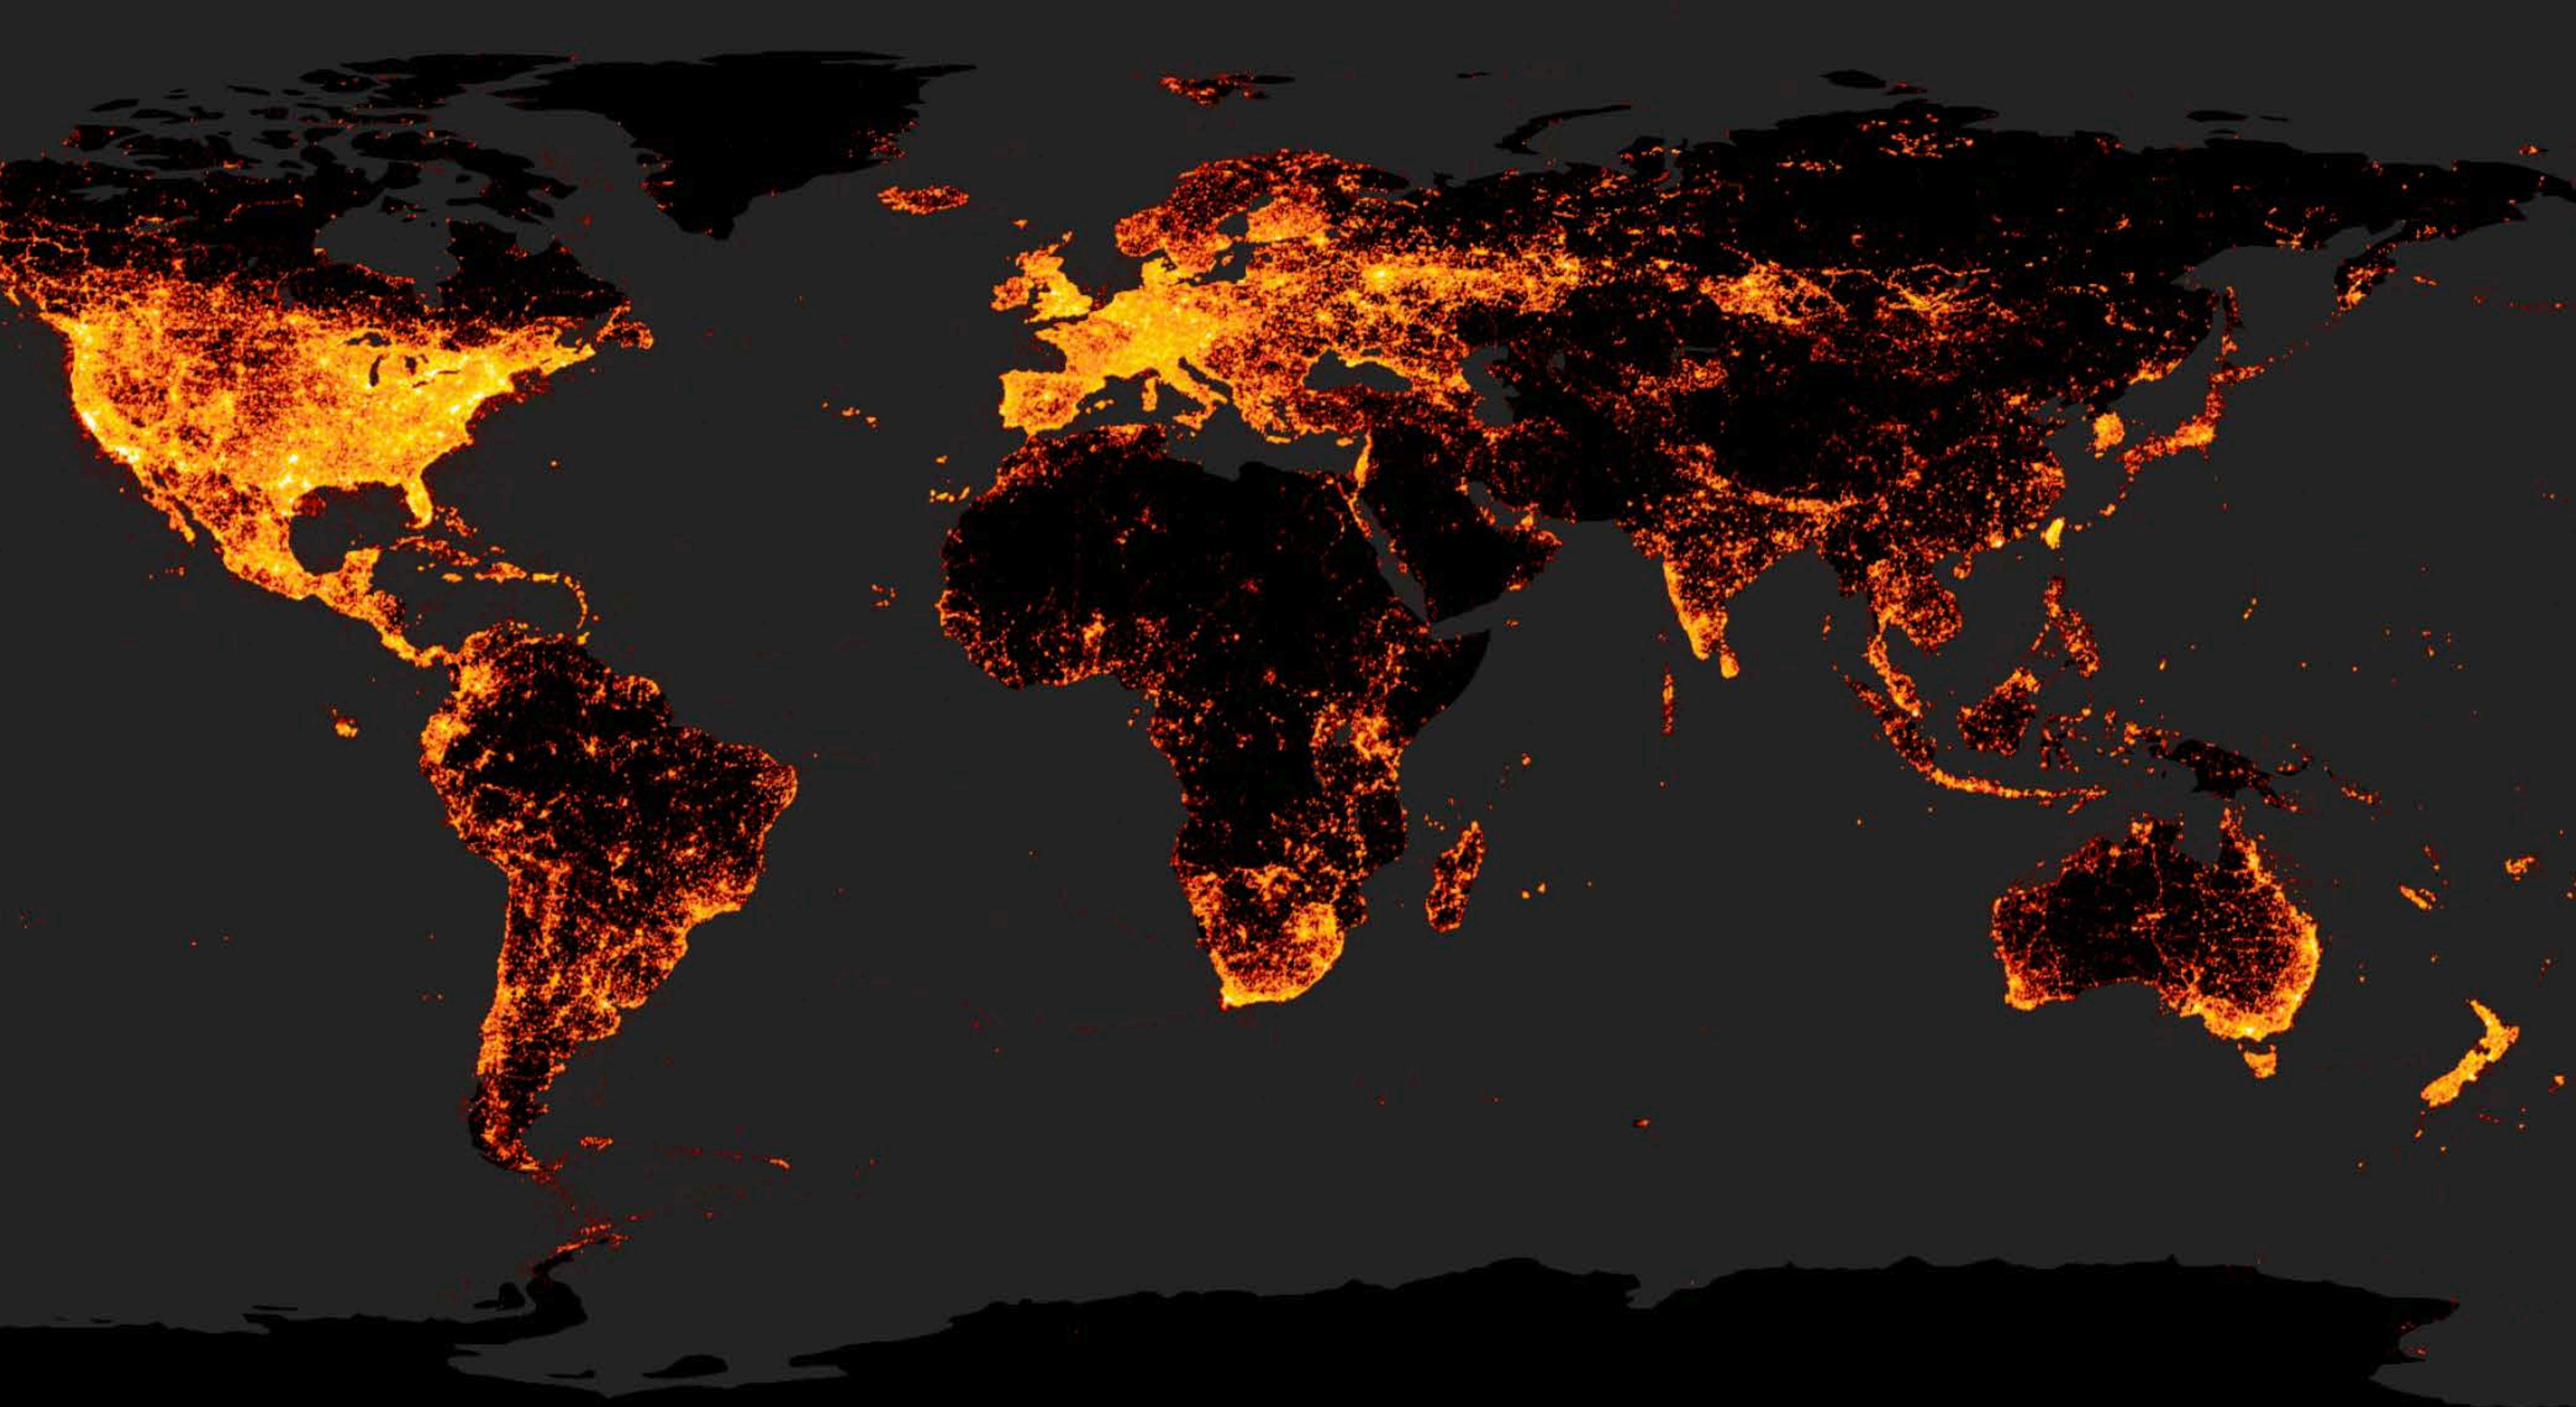

# iNaturalist

Open data provider

- There are currently >1.9 billion species occurrence records in the Global Biodiversity Information Facility (GBIF).
- More than 38 million come from iNaturalist.

# **How does it work?**

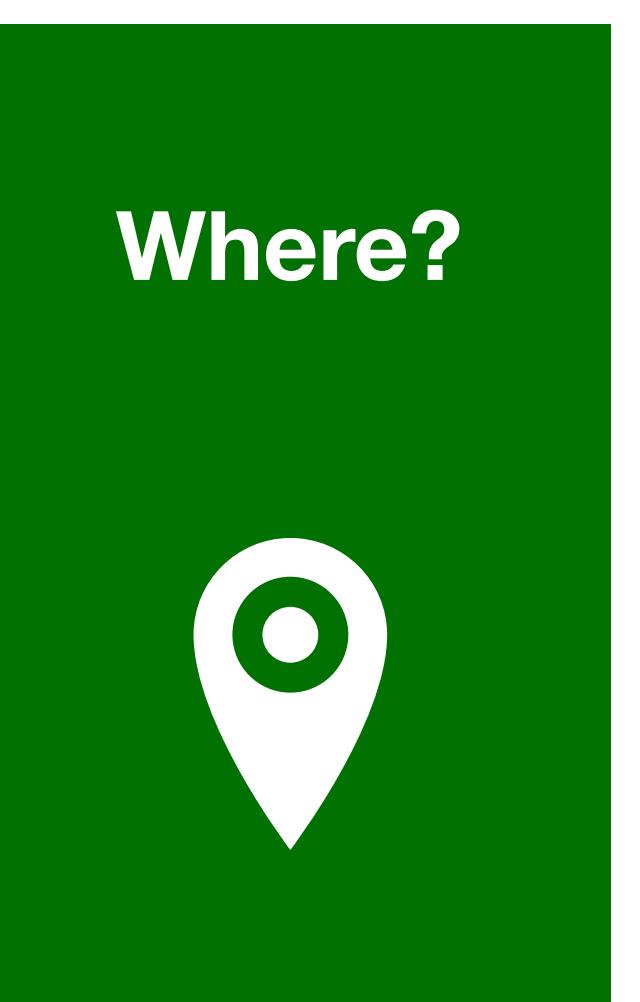

## **Making an observation**

# Making an observation

[inaturalist.org/observations/upload](https://inaturalist.org/observations/upload)

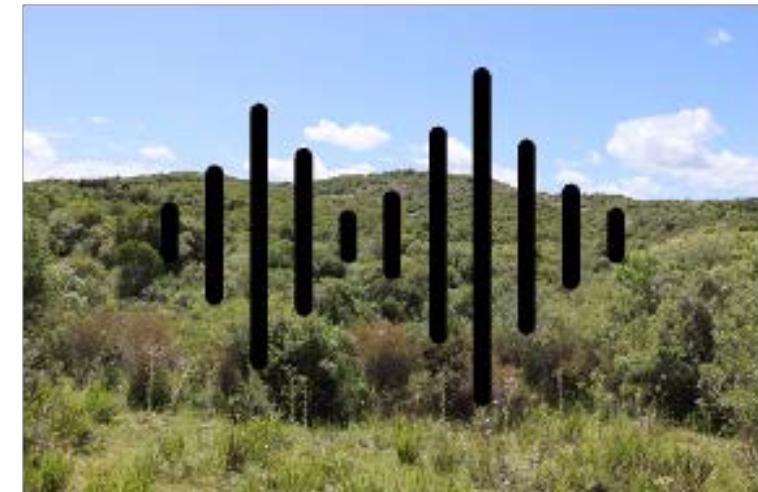

- Observations record an encounter with an **individual organism** at a particular **time** and **location**.

# Making an observation

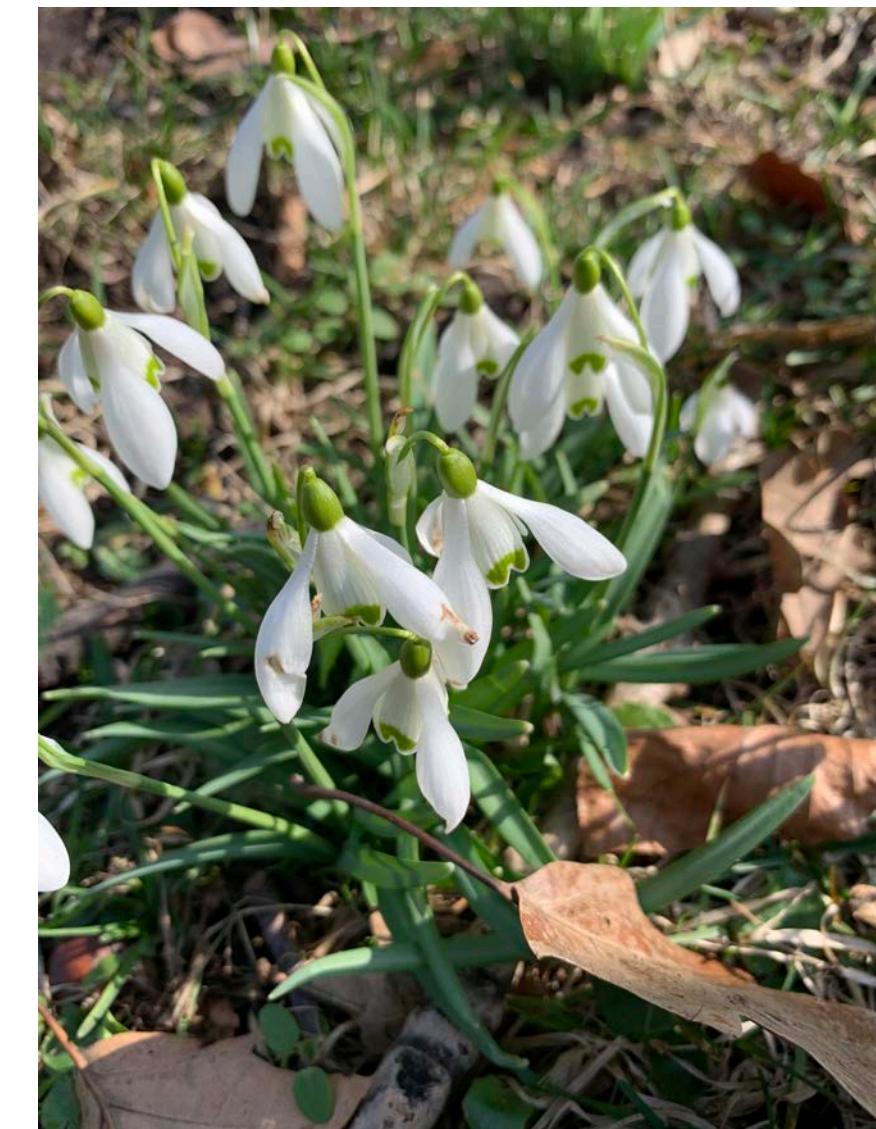

[inaturalist.org/observations/upload](https://inaturalist.org/observations/upload)

- Observations record an encounter with an **individual organism** at a particular **time** and **location**.

A screenshot of a mobile application interface for making an observation. At the top right are 'Cancel' and 'Details' buttons. Below is a section for adding media, with a plus sign button and two photo thumbnails. A radio button is selected for 'Default'. The main area contains a text input field with a question mark icon and a 'View suggestions' button. Below is a 'Notes...' field. Further down are sections for date/time (27/02/2022, 12:06), location (Stromovka, Prague, Prague, CZ, Lat: 50.106, Long: 14.408, Acc: 47 m), geoprivacy, and captive/cultivated status (No). At the bottom is a large green 'SHARE' button. A red arrow points to the 'What did you see?' text input field.

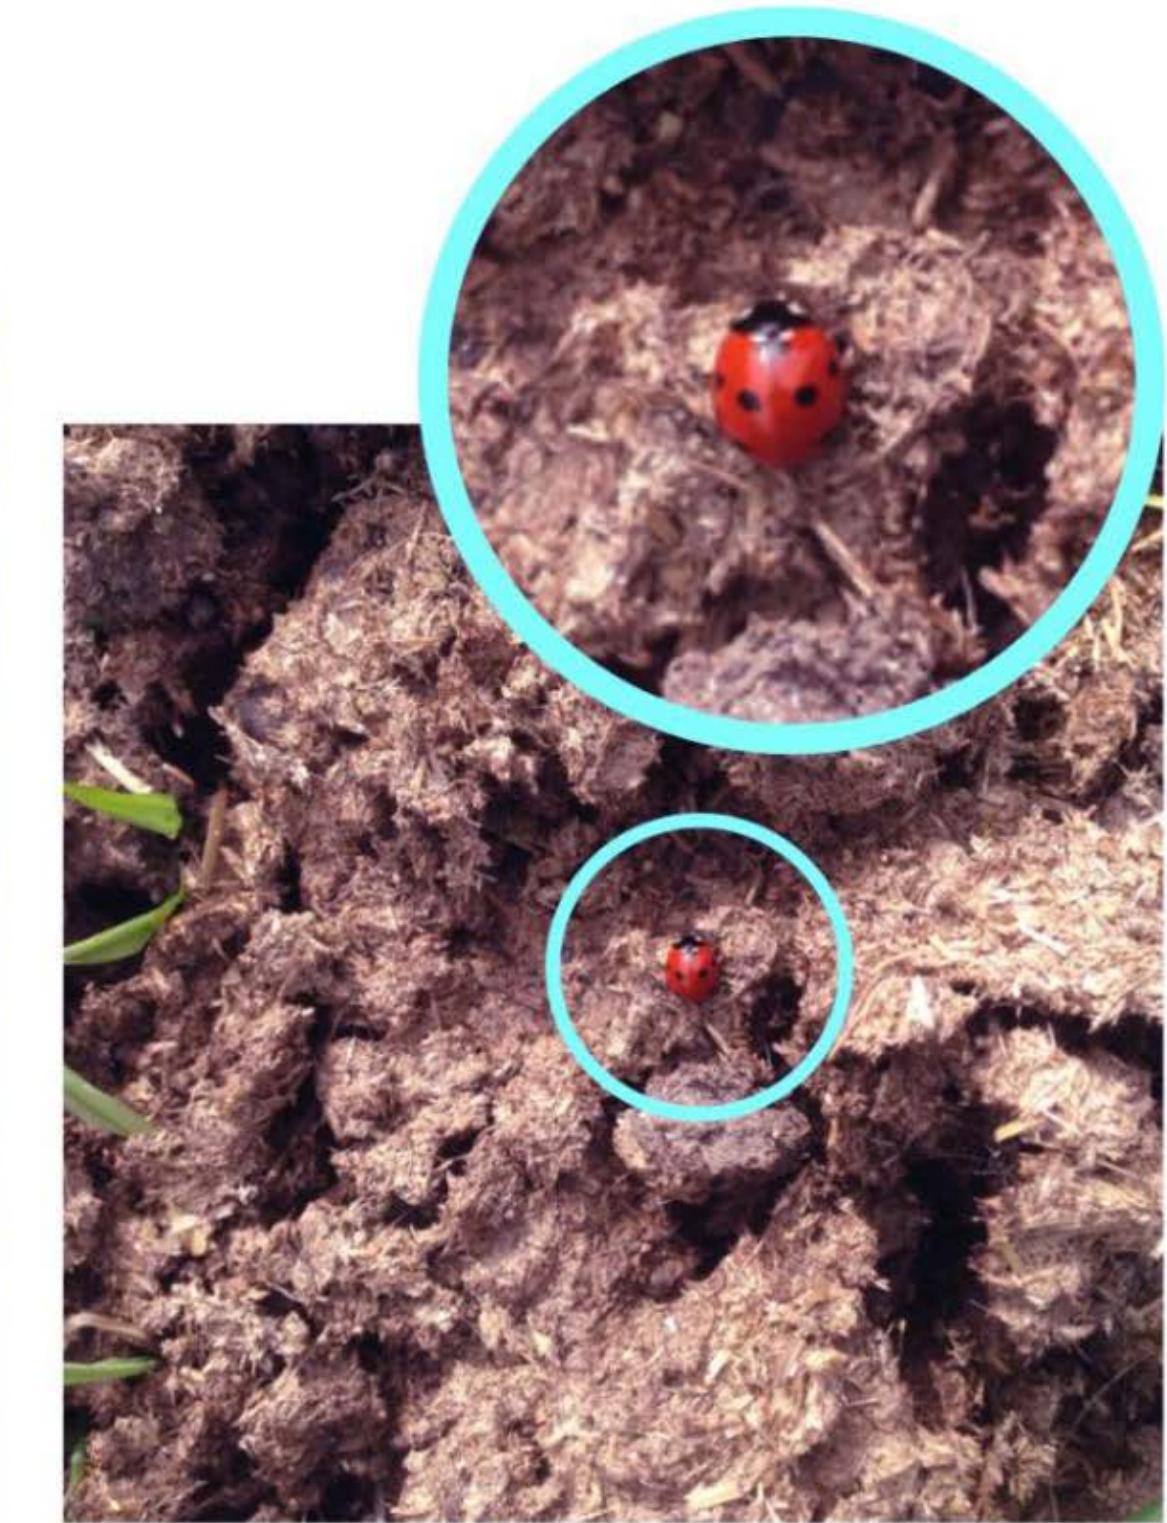

# Computer Vision

## Species ID Suggestions

- iNaturalist uses **computer vision systems** trained on users' photos and identifications in order to provide automated taxon identification suggestions.
- '**Seen nearby**

Two-spotted ladybug  
*Adalia bipunctata*

Seven-spotted ladybug  
*Coccinella septempunctata*

Geoprivacy

Captive / Cultivated No

Projects

SHARE

# Obscure location

## Geoprivacy

- The **individual observer decides** when information is restricted and when restricted information is shared.
- The public positional accuracy is increased to the diagonal of a  $0.2 \times 0.2$ -degree cell ( $\sim 500\text{km}^2$ ).
- Public latitude and longitude are replaced with a random point within this cell.

# Sensitive species

## Taxon geoprivacy

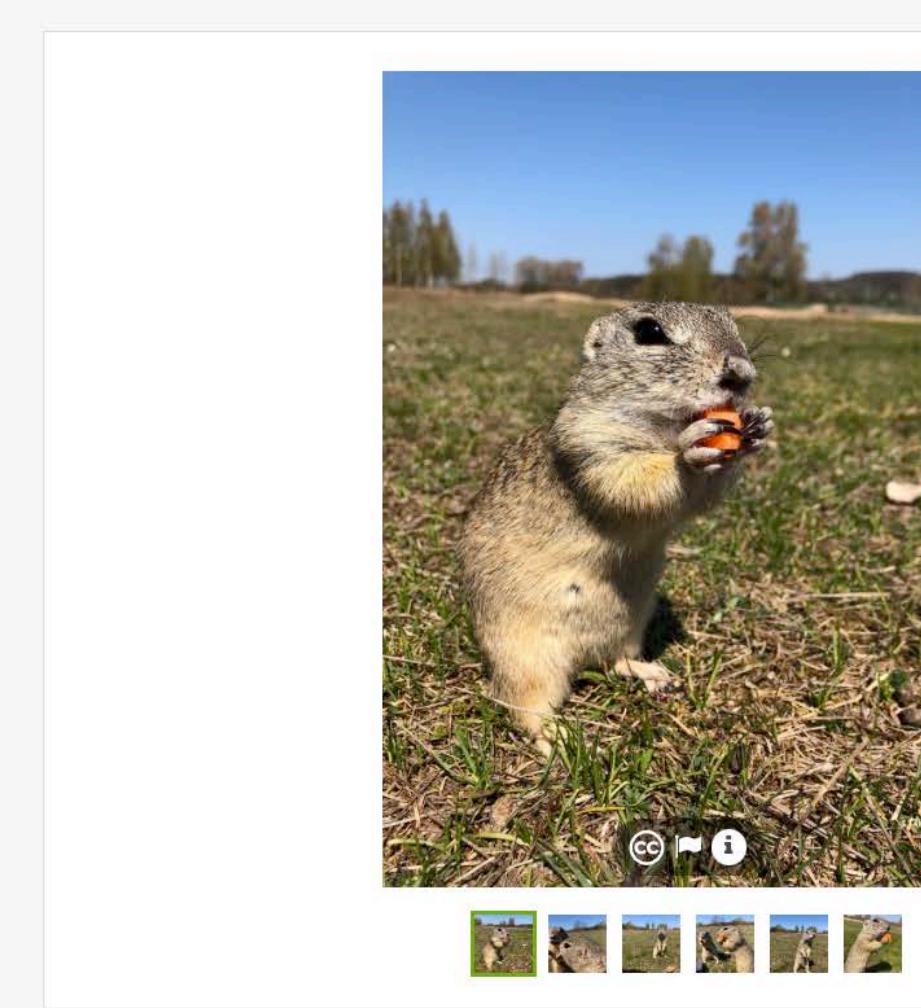

- Geoprivacy is automatically applied to all observations of a **threatened taxon**, globally or in the place specified by the conservation status.
- The **real** coordinates can be accessed (e.g., projects, agreements with national nodes).

"Endangered" Globally (Source: IUCN Red List)

About

Globally, there are over 1 billion vehicles driving on almost 6 million miles of paved roads. Every day, millions of mammals, herpetofauna, birds, and insects are killed trying to cross roads, or incidentally as they move around. At the Road Ecology Center, we want to reduce this loss and the first step is to understand where it is occurring. We operate the largest volunteer-based roadkill ...more ↓

Welcome to GLOBAL Roadkill

Because roadkill is a global problem, we are collaborating with organizations globally to record roadkill observations as both evidence of a species occurrence and of wildlife-vehicle conflict. The Road Ecology Center is an academic-science entity, but we believe that
